# **Enviro-Hub Holdings Ltd**

(ENVH SP/L23.SI)

### **Turning trash into treasure**

Alyssa Tee / 65 6202 1193 / alyssa.tee@kgi.com

- Enviro-Hub Holdings Ltd boasts a diverse portfolio of operations and investments. The company engages in ewaste and metal trading, refining, and recycling; carries out piling contracts and construction services; provides rental and servicing of machinery; manages property investments and operations; and manufactures and trades healthcare products.
- We initiate with an OUTPERFORM recommendation and TP of \$\$0.045, based on FY23F total market value. We expect FY23-25F PAT to grow at a CAGR of 11.2% on an increase in processing volume of e-waste recycling segment, gradual recovery of glove industry, and an increase in contributions from new pharmaceutical retail outlets.

Company background. Enviro-hub used to focus more on their building and construction and property investments and management sectors, however, after the acquisition of Malaysian glove manufacturer, Pastel Glove Sdn Bhd, and expansion into the pharmaceutical retail scene in Malaysia, under the brand 'R-Pharmacy', they have shifted their focus towards the development of their e-waste recycling and healthcare segments. The group views these areas as offering strong long-term growth prospects and has plans to continue expanding in the healthcare sector.

**FY22 financials review:** Revenue rose 9.2% on higher contributions from e-waste recycling and healthcare businesses. With Enviro-Hub now generating a positive operating cash flow. Proposed dividend of SG 0.1 cent per share.

**1H22** financial update: Growth of new segmental revenue. Enviro-Hub reported revenue of \$\$22.8mn for the period, representing a 29.0% YoY increase, and a 43.2% YoY rise in net profit attributed to owners. The revenue growth was driven primarily by a 14.6% YoY increase in sales from the recycling business. During 1H22, the newly acquired healthcare segment remained a consistent contributor to overall revenue, with sales of \$\$3.3mn.

| Major Shareholders          |       | Previous Recommendations |
| Ng Ah Hua                   | 34.7% |                          |
| Raymond Ng                  | 34.7% |                          |
| Law Siau Woei               | 19.3% |                          |

New Pharmaceutical Retail Outlets. Enviro-Hub established a 40% jointly owned company, R Pharmacy, through its subsidiary Pastel Care Sdn. Bhd. On April 19<sup>th</sup>, 2022, the first R-Pharmacy retail outlet was opened with the goal of making healthcare products more accessible and providing personalized services through in-house pharmacists. With 10 stores currently operating across Malaysia, the company plans to expand its presence by opening larger stores and providing more options for customers. In addition to in-store services, R-Pharmacy has also implemented virtual consultation services with real-time access to doctors and made its products available through various e-commerce platforms for convenient purchasing.

**Venturing into glove manufacturing.** The global glove manufacturing industry is currently experiencing a supply-demand imbalance, with an oversupply of gloves. However, Enviro-Hub is mitigating this by temporarily operating at a reduced capacity. With demand expected to recover within the next six months, the company is poised to quickly ramp up production and meet the rising demand for gloves. Despite muted plant utilisation rates, the downside for Enviro-Hub is minimised by the undertaking provided by PGSB ex-founder Law Siau Woei. He is liable to make payment to PGSB in the event that the segment is loss-making from 1 Jan 2022-31 Dec 2024.

**Expansion of e-waste recycling.** Enviro-Hub recently expanded its e-waste recycling capacity, enabling it to process more waste in a shorter amount of time. With this increase, the company is now able to take on more recycling projects and is expected to see a growth in segmental revenue. The plant is expected to open in 2H23 with a 41.7% increase in processing capacity to 5,100 tonnes per year. It is well positioned to benefit from an increase in processing volume amidst rising demand from MNCs and higher contract values.

**Valuation & Action:** We initiate Enviro-hub with an **Outperform** recommendation and a \$\$0.045 Target Price based on the SOTP valuation of its 3 segments namely, Recycling, Property and Healthcare.

**Risks:** Margin pressure due to competition and oversupply in the glove industry. Rising interest rates and fluctuations in exchange rates will impact Enviro-hubs reported revenue and profits.

### **Business at a glance**

Enviro-Hub Holdings Limited (EHH) is an investment holding company whose subsidiaries operate geotechnic and piling works and develop properties. The Company also sells, services and rents engineering hardware, construction machinery and equipment, and recycles metals and plastics. On 27 October 2021, the group fully acquired the remaining 75% of shares in Pastel Glove Sdn. Bhd. (PGSB). Through the Group's wholly-owned subsidiary, PGSB incorporated a company, Pastel Care Sdn. Bhd. (PCSB), with a 40% equity interest.

The Group has 4 main business segments namely:

- > Trading, recycling and refining of e-waste/metals
- Investment properties
- Piling contract, construction, rental and servicing of machinery
- Healthcare products

Figure 1: Enviro-Hub's business segments

Source: Enviro-Hub's 2021 Annual Report

EHH has identified the healthcare industry as a growth opportunity and has expanded its operations to encompass the healthcare supply chain. Along with manufacturing gloves through its subsidiary Pastel Glove Sdn Bhd, the company has entered the pharmaceutical retail outlet business in Malaysia and plans to focus on these e-waste recycling and healthcare segments moving forward. Regarding its construction segment, the group will continue to carefully monitor costs and has no new contracts or projects planned and is working towards winding down this business segment and disposal of its assets. It is also actively seeking a suitable time to divest assets held for sale from its investment properties segment.

### **Industry**

The focus will be on Enviro-Hub's e-waste recycling sector as it generates the majority of its revenue.

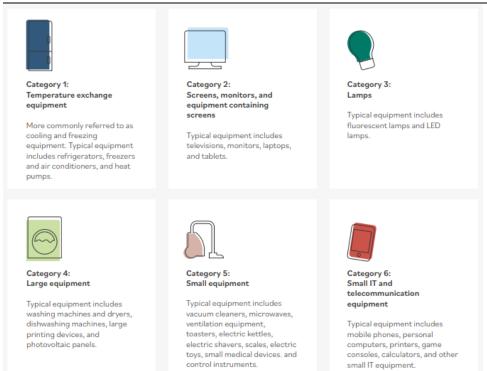

As people become more environmentally conscious, there is a growing trend towards ecofriendliness and an increase in electronic waste. Companies are taking responsibility for their products and recycling them, giving manufacturers a sense of responsibility, and creating business opportunities for recycling companies that both manufacturers and consumers pay to dispose of and repurpose electronic waste.

The global production of electronic waste (e-waste) is increasing at an alarming rate and is expected to reach 74 million metric tonnes by 2030. E-waste is defined as discarded electronic devices, and it is a rapidly growing waste stream worldwide. Improper disposal of e-waste can lead to negative environmental and health impacts, such as the release of toxic substances. Developed countries generate majority of the e-waste, but developing countries are also contributing to the growth.

Most e-waste is made up of small equipment such as smartphones and laptops, however, large equipment such as refrigerators and washing machines also contribute to e-waste production. According to a United Nations report, global e-waste production reached 53.6 million tonnes in 2019, which is 21% higher than in 2014 and is expected to increase by 21% in the next five years. The highest e-waste-producing countries are China, the United States, and Japan. The report highlighted that only 17.4% of e-waste is formally recycled, and 80% of e-waste is dumped in landfill, open burning, or being informally recycled.

Many developing countries lack the infrastructure and regulations to properly manage e-waste, leading to illegal exporting of e-waste to these countries and informal sector recycling practices that are harmful to both the environment and human health. Solutions to the e-waste problem include extending producer responsibility, promoting sustainable consumption and production (increasing the use of recycled materials in the production of new devices and promoting repair and refurbishment of electronic devices), and strengthening global cooperation on e-waste management.

Figure 2: Electrical and electronic equipment (EEE) categories for comparison and international benchmarking of the e-waste management performance

Source: UNITAR – Global Transboundary E-waste Flows Monitor – 2022

Just over 17% of the world's e-waste is properly recycled – but the United Nations International Telecommunication Union has set a target to raise that to 30% by 2023.

### Singapore too is playing a part in the recycling of E-waste.

Singapore generates about 60,000 tonnes of e-waste annually, only about 20% of it is recycled. On 1 July 2021, the government implemented a new e-waste management system to increase the recycling of electronic waste. The system will require manufacturers and importers of electronic products to register with the National Environment Agency (NEA) and join an e-waste recycling scheme. Under the system, manufacturers and importers will be responsible for the collection, transportation, and proper disposal of their products at end-of-life and will be financially liable for it. Also, the government is providing financial incentives to consumers through a rebate scheme for the disposal fee. The NEA is working with retailers and e-waste collectors, such as ALBA, to make it convenient for citizens to recycle their e-waste, raising awareness through public education campaigns and hopes to increase e-waste recycling rate to 30% by 2020 and to 60% by 2030.

### **Investment thesis**

Birth of new pharmaceutical chain. Enviro-Hub has launched a new brand called 'R-Pharmacy' as part of its healthcare products segment. The first store opened in April 2022 in Klang Valley, Malaysia and aims to provide customers with a personalized experience through recommendations from in-house pharmacists. As of February, the group has opened 10 stores across Malaysia, with plans to open 4 40 total stores by 2024. These stores in the timeline are going to range above 1,400 sqft per store, allowing these pharmacies to carry more products to cater to larger audiences.

The stores are located in primary areas without other pharmacies nearby and are funded internally. R-Pharmacy offers a wide range of products, with an ever-growing inventory of over 10,000 items, including prescription medication and common ailment products. To reach a wider audience, appealing to millennials, R-Pharmacy also lists its products on online platforms such as Lazada and Shopee for convenient ordering from a trusted retailer.

R-Pharmacy has partnered with Doc2us to bring telemedicine kiosks to its pharmacy outlets, allowing patients to have virtual consultations with doctors and receive electronic prescriptions. In addition to the virtual consultations, patients have access to the support of in-house pharmacists who can provide additional information during the consultation, such as blood pressure and temperature. The pharmacist can then dispense the prescribed medication, and the information is saved in the pharmacy's database for future reference and refills. This service sets R-Pharmacy apart from other pharmacies in Malaysia.

Glove manufacturing. The Group has entered the healthcare sector with its subsidiary, Pastel Glove Sdn. Bhd., which received FDA 510(k) clearance in June 2021 for its medical-grade nitrile gloves. The subsidiary has the capability to produce custom gloves for specific customer needs, such as 10g healthcare gloves and black latex gloves used in various industries. The factory operations are led by the original founders of the company, who are veterans in the industry.

Pastel Glove has 4 existing glove manufacturing lines with a production capacity of 800 million to 1 billion gloves per year but is currently only operating 2 of them due to decreased demand. Despite the oversupply of nitrile gloves in the market, the management was able to strategically shift production towards latex gloves, which saw more demand and better pricing, allowing them to outperform their peers.

Top Glove Corporation Bhd is the world's largest manufacturer of gloves. Below are Top Glove's quarterly revenue and net profit to show the global market trend for gloves during both pre-pandemic and post.

Source: Top Glove, KGI Research

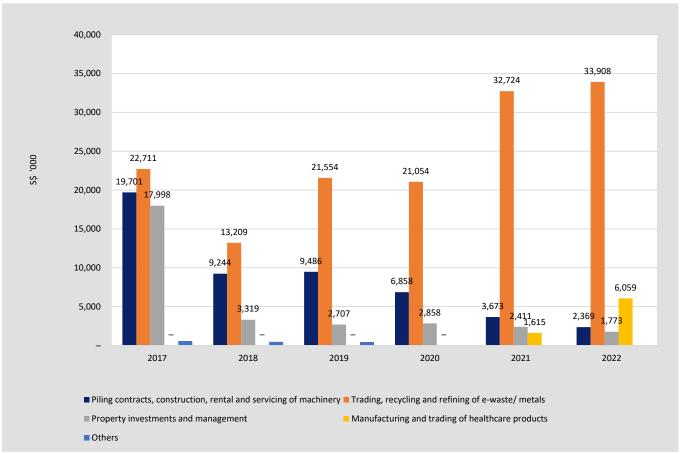

Source: Top Glove, KGI Research

Malaysia's rubber glove sector is facing challenges due to imbalances in demand and supply and elevated costs, but the Malaysian Rubber Glove Manufacturers Association (MARGMA) predicts that the demand for gloves will rise by 15% in 2023 and inventory levels will normalize by the first half of 2023, with the depletion of inventory in the pipeline bringing about equilibrium between production capacity utilisation and global demand. Additionally, the glove industry is advancing towards recycling, incorporating new raw materials, additives, and substances that are environmentally friendly and biodegradable.

**Recycling of E-waste.** Enviro-Hub is a leading provider of e-waste recycling services (with only about 5 players of a similar scale to the Group in Singapore), operating under the brands Cimelia Resource Recovery and HLS Environmental. The company collects e-waste from major multinational corporations and uses its recycling process to extract precious and base metals that can be sold as revenue. With an increasing focus on environmental sustainability, Enviro-Hub has seen a rise in demand for its services and will expand its recycling plant capacity by 40% to 5,100 tonnes/year by 2H2023. The recycling of e-waste segment has been a strong performer for the company, with operating profit before tax more than doubling since 2018 to \$\$6.6 million in 2021. In the first half of 2022, revenue from the recycling of e-waste segment grew 14.6% year-over-year to \$\$16.4 million, with profit more than doubling to \$\$3.5 million.

With EHH to expand its recycling facilities by 2H2023, doubling its waste recycling capacity. Their brands are endorsed by the NEA and they also support ALBA in the recycling of e-waste collected from bins around Singapore. EHH is well poised to benefit from the rising processing volume and contract values of e-waste recycling from electronics manufacturers.

Figure 6: Historical segmental revenue of Enviro-hub showing the difference in revenue generated by each segment.

Source: Enviro-hub, KGI Research

## Valuations and peer comparison

Given that Enviro-hub's recycling, property and healthcare segments are slightly worse than its competitors, we decided to give it a slightly lower P/E and P/S as compared to its competitors due to them operating on a smaller scale.

We used the sum-of-the-part (SOTP) method to derive a TP of S\$0.045 per share based on S\$6.4mn FY23F net profit and valuation multiples shown below.

Figure 7: Peer comparison

| Segments  | Recycling   | Property | Healthcare (P/S) |          |
|---|-------------|----------|------------------|----------|
| Segments  | (P/E)       | (P/S)    | Glove            | Pharmacy |
| Industry average P/E(x) / P/S(x)                | 13.4        | 2.8      | 1.8              | 0.2      |
| Projected P/E(x) / P/S(x)                       | 11.4        | 1.5      | 1.4              | 0.1      |
| Projected market value of segment (\$\\$ '000)  | 58,936.2    | 2,127.6  | 7,354.4          | 163.6    |
| Projected market value of Enviro-hub (S\$ '000) | 68,581.8    |          |                  |          |

### **Key Risks**

**Exchange rate risk.** Fluctuations in currency exchange rates can have a significant impact on the financial performance of companies with operations in multiple countries. For Enviro-Hub Holdings, the use of the Singapore dollar in their financial statements, while earning much of their revenue in Malaysian ringgit, can result in an unfavourable exchange rate, leading to a decrease in revenue as reported in their financial statements. Additionally, changes in exchange rates may also impact the competitiveness of the company's subsidiary, Pastel Glove Sdn Bhd, in the global market for gloves. These currency exchange rate risks must be closely monitored and managed by the company to mitigate potential negative effects on its financial performance.

**Rising interest rate risk.** As interest rates rise globally, there may be an increased financial burden on the company as it will incur higher interest costs on its outstanding debts. This may impact their financial performance and ability to meet their financial obligations. It is important for the company to closely monitor interest rate trends and implement appropriate risk management strategies to mitigate the potential impact on its financial position.

**Market risk.** Changes in government regulations and policies regarding e-waste disposal and recycling may impact the demand and profitability of e-waste recycling firms. The market for recycled materials is also subject to fluctuations and changes in global supply and demand, which can affect the prices and demand for these materials. These factors can lead to uncertainty and fluctuations in the revenues and profitability of e-waste recycling companies.

**Environmental risk.** Proper disposal of electronic waste is crucial to minimize the negative impacts on the environment and human health. E-waste recycling companies must adhere to strict regulations and guidelines to avoid penalties and fines. Moreover, the use of informal e-waste recycling practices can pose significant health risks to workers and communities, including exposure to toxic chemicals and heavy metals. Similarly, the glove manufacturing industry must also consider potential risks related to environmental regulations and sustainability, such as emissions of greenhouse gases, waste management and disposal, and the use of hazardous materials.

**Competition risks:** The e-waste recycling industry is becoming more and more competitive, with new firms entering the market regularly. This can make it difficult for established firms to compete and maintain market share. The glove manufacturing sector also faces high competition risks with many firms going into the booming glove industry during the peak of Covid-19. With the increased demand for gloves due to the COVID-19 pandemic, many new players have entered the market, leading to overcapacity and increased competition.

**Oversupply risks.** Overcapacity in the global glove market may continue to cause low selling prices and depressed plant utilization throughout 2023. The industry may take longer than Malaysian Rubber Glove Manufacturers Association (MARGMA) predictions and only recover after more years of consistent demand growth to fill the current excess capacity.

**Financial risks:** E-waste recycling firms may face financial risks associated with the costs of collection, transportation, and disposal, as well as the cost of complying with environmental regulations.

**Quality risks:** Glove manufacturers may face risks related to quality control, such as product defects or contamination, which can lead to costly recalls and damage to reputation.

Weak demand and lower ASPs for Gloves. The current state of the rubber glove market is characterized by a correction and imbalance in demand and supply. This has led to a decrease in customer orders because of stockpiling at warehouses and a reluctance among customers to place larger orders due to expectations of further declines in average selling prices and shorter delivery times due to lower utilization among manufacturers. Hence, possibly causing them to further reduce their production capacity. Additionally, there is intense price

competition from other glove manufacturers and exceptionally low pricing from some manufacturers who are exiting the market, which has disrupted the pricing structure in the industry.

**Production costs of Gloves.** The price of raw materials, such as natural rubber, latex and nitrile may fluctuate, due to supply chain disruptions and consumption levels. Additionally, the increase in natural gas tariffs, which rose by approximately 24% in October 2022, has added to the costs of production and affected the profitability of manufacturers. The low utilization rate, combined with the increase in natural gas tariffs, has led to an escalation of production costs per unit. Furthermore, declining average selling prices and rising unit costs have resulted in compressed margins for manufacturers. It is expected that these challenges will continue in the first quarter of 2023.

**Expansion risk.** The fast pace at which R-Pharmacy branches are opening could lead to operational inefficiencies and difficulties in maintaining the same level of customer service and quality across all locations, which may negatively impact the overall brand reputation and customer satisfaction. Additionally, there may be increased pressure on the management team to oversee the rapid expansion, which could lead to increased costs and resource constraints.

**E-waste recycling.** The potential for increased demand for electronic waste recycling services presents a risk for Enviro-Hub Holdings. As the volume of e-waste continues to rise, the company may struggle to keep up with the influx of materials, resulting in a lack of storage capacity. This could lead to delays in the processing and recycling of e-waste, potentially impacting the company's ability to meet the needs of its clients and potentially damaging its reputation as a reliable e-waste recycling provider.

### **KGI's Ratings**

| Rating           | Definition  |
|------------------|---|
| Outperform (OP)  | We take a positive view on the stock. The stock is expected to outperform the expected total return of the KGI coverage universe in the related market over a 12-month investment horizon.  |
| Neutral (N)      | We take a neutral view on the stock. The stock is expected to perform in line with the expected total return of the KGI coverage universe in the related market over a 12-month investment horizon.   |
| Underperform (U) | We take a negative view on the stock. The stock is expected to underperform the expected total return of the KGI coverage universe in the related market over a 12-month investment horizon   |
| Not Rated (NR)   | The stock is not rated by KGI Securities.   |
| Restricted (R)   | KGI policy and/or applicable law regulations preclude certain types of communications, including an investment recommendation, during the course of KGI's engagement in an investment banking transaction and in certain other circumstances. |

#### **Disclaimer**

This report is provided for information only and is not an offer or a solicitation to deal in securities or to enter into any legal relations, nor an advice or a recommendation with respect to such securities. This report is prepared for general circulation. It does not have regard to the specific investment objectives, financial situation and the particular needs of any recipient hereof. You should independently evaluate particular investments and consult an independent financial adviser before dealing in any securities mentioned in this report.

This report is confidential. This report may not be published, circulated, reproduced or distributed and/or redistributed in whole or in part by any recipient of this report to any other person without the prior written consent of KGI Securities. This report is not intended for distribution and/or redistribution, publication to or use by any person in any jurisdiction outside Singapore or any other jurisdiction as KGI Securities may determine in its absolute discretion, where the distribution, publication or use of this report would be contrary to applicable law or would subject KGI Securities and its connected persons (as defined in the Financial Advisers Act, Chapter 110 of Singapore) to any registration, licensing or other requirements within such jurisdiction.

The information or views in the report ("Information") has been obtained or derived from sources believed by KGI Securities to be reliable. However, KGI Securities makes no representation as to the accuracy or completeness of such sources or the Information and KGI Securities accepts no liability whatsoever for any loss or damage arising from the use of or reliance on the Information. KGI Securities and its connected persons may have issued other reports expressing views different from the Information and all views expressed in all reports of KGI Securities and its connected persons are subject to change without notice. KGI Securities reserves the right to act upon or use the Information at any time, including before its publication herein.

Except as otherwise indicated below, (1) KGI Securities, its connected persons and its officers, employees and representatives may, to the extent permitted by law, transact with, perform or provide broking, underwriting, corporate finance-related or other services for or solicit business from, the subject corporation(s) referred to in this report; (2) KGI Securities, its connected persons and its officers, employees and representatives may also, to the extent permitted by law, transact with, perform or provide broking or other services for or solicit business from, other persons in respect of dealings in the securities referred to in this report or other investments related thereto; and (3) the officers, employees and representatives of KGI Securities may also serve on the board of directors or in trustee positions with the subject corporation(s) referred to in this report. (All of the foregoing is hereafter referred to as the "Subject Business".)

However, as of the date of this report, neither KGI Securities nor its representative(s) who produced this report (each a "research analyst"), has any proprietary position or material interest in, and KGI Securities does not make any market in, the securities which are recommended in this report.

Each research analyst of KGI Securities who produced this report hereby certifies that (1) the views expressed in this report accurately reflect his/her personal views about all of the subject corporation(s) and securities in this report; (2) the report was produced independently by him/her; (3) he/she does not carry out, whether for himself/herself or on behalf of KGI Securities or any other person, any of the Subject Business involving any of the subject corporation(s) or securities referred to in this report; and (4) he/she has not received and will not receive any compensation that is directly or indirectly related or linked to the recommendations or views expressed in this report or to any sales, trading, dealing or corporate finance advisory services or transaction in respect of the securities in this report. However, the compensation received by each such research analyst is based upon various factors, including KGI Securities' total revenues, a portion of which are generated from KGI Securities' business of dealing in securities.
